

-- Create Database

CREATE DATABASE CompanyDB;

-- Use Database

USE CompanyDB;

-- Create Employee Table with Constraints

```
CREATE TABLE Employee (  
    Emp_ID INT PRIMARY KEY,  
    Name VARCHAR(50) NOT NULL,  
    Email VARCHAR(100) UNIQUE,  
    Salary DECIMAL(10,2) CHECK (Salary > 10000)  
);
```

-- Insert Records

```
INSERT INTO Employee (Emp_ID, Name, Email, Salary)  
VALUES  
(1, 'Rahul', 'rahul@gmail.com', 25000),  
(2, 'Amit', 'amit@gmail.com', 30000),  
(3, 'Sneha', 'sneha@gmail.com', 45000);
```

-- Display Table

```
SELECT * FROM Employee;
```

-- Example for CHECK Constraint Failure

-- This will give error because salary is less than 10000

```
-- INSERT INTO Employee VALUES (4, 'Riya', 'riya@gmail.com', 8000);
```

-- Example for UNIQUE Constraint Failure

-- This will give error because email already exists

-- INSERT INTO Employee VALUES (5, 'Karan', 'rahul@gmail.com', 20000);

-- Example for NOT NULL Constraint Failure

-- This will give error because Name cannot be NULL

-- INSERT INTO Employee VALUES (6, NULL, 'test@gmail.com', 22000);

-- Drop Table

-- DROP TABLE Employee;
